November 10, 2021

- Introductions
- Principal introduced herself and members of the SDMC

- SIP
- Where we are now in instructions. Campus Based Assessment, High Frequency Words for 1st and 2nd grade

  How can we improve?

  Tutorials are being held on Tuesday and Thursday from 3:15-4:15

- Robotics
- We are excited to have a Robotics Team this year at Felix Cook Jr. Elementary. As of November 1st, we have 3rd 4th and 5th grade participants and one female, Priscilla Contreras. We have worked on several projects including building a hover racer, a robot and starting to use the Scratch program. Scratch was created by MIT to assist young learners to create video games, digital storytelling and learn basic programming. All of the students have created at least three projects in Scratch and two of them have developed a video game!
- Our students are excellent Log builders. They have built projects and we display them in the library to motivate the students interested in becoming engineers and technology experts. Two weeks ago, we were invited to join a Lego League where we will participate in a logistics project. The students on the Robotics Team will work in groups of four to build a transportation device and they will present their findings on how to create better transportation to aid with our supply chain dilemma. The students will research the best ways to use our resources to import and export goods in an expedient manner to solve the delays we have in our ports and trucking system.
- We are excited about the progress we have achieved in the first few months of school and look forward to showcasing our talents!

- Family Engagement Opportunities
- Parent computer literacy classes
- Parenting classes on how to deal with social issues
- Parenting classes on nutrition

- Questions and Concerns

- Next Meeting December 15, 2021
